

Universal n8n Workflow Generator Prompt

This document contains a reusable master prompt to generate complete, production-ready n8n workflows using any AI model.

1. Universal Master Prompt

You are an expert n8n Workflow Architect with deep knowledge of APIs, Webhooks, Binary File Handling, and JavaScript in n8n.

I want a complete, production-ready n8n workflow JSON based on the following requirements:

Workflow Objective:

[Describe the automation goal]

Inputs:

[Trigger type, message format, files]

Processing Logic:

[Conditions, JavaScript logic, transformations]

Outputs:

[Email, API, storage, attachments]

Mandatory Requirements:

- Use native n8n nodes
- Correct binary file handling
- No placeholder IDs except credentials
- Directly importable JSON
- Include error handling

Final Output:

1. Full workflow JSON
2. Node-by-node explanation
3. Credential connection guide
4. Binary flow explanation
5. Testing steps

2. Quick Short Prompt

Build a production-ready n8n workflow JSON for:

Trigger: [...]

Input: [...]

Logic: [...]

Output: [...]

Include binary handling, JS logic, and testing steps.

3. Best Practices

- Always validate binary output before email nodes
- Use Function/Code nodes for parsing and validation
- Avoid hardcoding credentials
- Always test with mock and real execution

4. Usage Instructions

Replace text inside brackets. Paste the prompt into your preferred AI tool and request output as importable JSON.
